GIT CLASS 2

GIT RM : Used to unstage the files (untrack)

git rm --cached filename

GIT IGNORE:

- It will be useful when you don't want to track some specific files then we use a file called .gitignore
- create some text files and create a directory with "jpg" files.

GIT CONFIG : Used to add our name and email for git history

git config user.name "username" : used to add our name

git config user.email "email" : used to add email

GIT RESET: This command is used to delete latest commits

git reset --hard HEAD~1 : used to delete latest commit along with changes

git reset --soft HEAD~1 : used to delete only latest commit

git update-ref -d HEAD: used to delete all commits at a time (only commits)
